Investors must realize that all investments in mutual Funds and securities are subject to market risks. Our target return / dividend range cannot be guaranteed and it should be clearly understood that the portfolio of the Fund is subject to market price fluctuations and other risks inherent in all such investments. The risks emanate from various factors that include, but are not limited to:

- (1) **Government Regulation Risk** - Government policies or regulations are more prevalent in some securities and financial instruments than in others. Funds that invest in such securities may be affected due to change in these regulations or policies, which directly or indirectly affect the structure of the security and/or in extreme cases a governmental or court order could restrain payment of capital, principal or income.
- (2) **Credit Risk** - Credit Risk comprises Default Risk and Credit Spread Risk. Each can have negative impact on the value of the income and money market instruments including Sukuks etc:
 - Default Risk**- The risk that the issuer of the security will not be able to pay the obligation, either on time or at all;
 - Credit Spread Risk** - The risk that there may be an increase in the difference between the return/markup rate of any issuer's security and the return/markup rate of a risk free security. The difference between this return/mark up rates is called a "credit spread". Credit spreads are based on macroeconomic events in the domestic or global financial markets. An increase in credit spread will decrease the value of income and including money market instruments;
